## MSK - Docker images installation

Our task was to install 5 docker images. It was pretty easy to do. It required only one command with different package names. This command looked like this

```
docker pull <package_name>
```

Some examples of usage

```
docker pull httpd
```

```
docker pull golang
```

To display a list of installed images we use the command

```
docker image list
```

After installing 5 packages and typing a command to display a list of installed images the result looks like this

```
kubernetes@kubernetes-VirtualBox:~$ docker image list
```

REPOSITORY	TAG	IMAGE ID	CREATED	SIZE
bioconductor/bioconductor_docker	devel	cda7f8509643	8 days ago	4.02GB
